DETAILED ACTION

Claim Objections

Claims 21 and 34 are objected to because of the following informalities: Claim 21 depends upon cancelled claim 20. Claim 34 depends upon itself. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-6, 10-18, 22-24, 26, 27, 29-33 and 36-39 are rejected under 35 U.S.C. 102(3) as being anticipated by Mostov US Patent 6,448,873.

Mostov disclose in figure 10 a circuit on a printed circuit board comprises capacitors 122, 134, 136, 130 and 138, suspended printed inductors (serpentine) 124, 128 and 140 and suspended printed interdigital capacitors 126, 132 and 142. In accordance with the present invention, the entire area within the border 139 of the filter circuit is devoid of a ground plane. The ground plane 131 may be situated on the upper or lower layers or both and does not play a role in the operation of the SPI or SIC

components. The signal passes from one layer to another by way of vias 133. Input terminal 144 receives an input while the output terminal 146 connects to next stage circuitry. One of the capacitors used may be a tunable trimming capacitor that is useful to permit adjustments to be made at production time.

Allowabl Subject Matt r

Claims 7-8, 19, 25 and 28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The prior art of record does not teach or fairly teach the serpentine conductor has a length (L) and a width (W) and wherein the respective lengths of the turns establishes a space (S) between adjacent linear segment and wherein the number of turns is equal to N, and wherein S, L, W and N are chosen so that the serpentine conductor is at least approximately series resonant with the tuning capacitance at a significant frequency F_0 .
